

Cotton • Soybean • Jowar — Pest & Disease Symptom Dataset

Preprocessed records for the three selected Maharashtra crops. Image availability/source is included where a representative field image was located.

Crop	Type	Pest / Disease	Key Symptoms	Image Availability / Source
Cotton	Pest	American bollworm	Round holes in squares/bolls; caterpillar or frass at entry; damaged seeds and lint.	Representative symptom images available from ICAR-CICR cotton field guides.
Cotton	Pest	Pink bollworm	Rosetted flowers; larvae inside bolls; damaged seeds/lint; poor boll opening.	Representative symptom images available from ICAR-CICR cotton field guides.
Cotton	Pest	Whitefly	Leaf yellowing/curling; honeydew and sooty mold; reduced plant vigor.	Representative images available from agricultural crop-protection references.
Cotton	Pest	Thrips	Silvery streaks/scarring on young leaves; curling, distortion and stunting.	Representative images available from agricultural crop-protection references.
Cotton	Disease	Bacterial blight	Water-soaked angular leaf spots; vein blackening; black-arm lesions; boll rot.	Image source: UGA Cotton bacterial blight field image.
Cotton	Disease	Cotton leaf curl virus	Leaf curling; thickened veins/enations; small malformed leaves; stunting.	Representative images available from cotton disease field guides.
Cotton	Disease	Fusarium wilt	Yellowing and wilting; vascular browning; gradual drying and death of plants.	Representative images available from cotton disease field guides.
Soybean	Pest	Stem fly	Punctures and mines in stems; zig-zag reddish tunnelling; wilting or weakened plants.	Image/illustration available in TNAU soybean crop-protection reference.
Soybean	Pest	Girdle beetle	Larval tunnelling with a girdling ring; stem breakage or drying above the girdle.	Representative images available in ICAR soybean pest references.
Soybean	Pest	Defoliating caterpillars	Irregular holes and missing leaf tissue; severe feeding causes heavy defoliation.	Representative images available in ICAR soybean pest references.
Soybean	Disease	Yellow mosaic virus	Yellow-green mosaic patches; mottling/crinkling; stunting; reduced flowers and pods.	Image source: ICAR-Indian Institute of Soybean Research YMV reference.
Soybean	Disease	Anthracnose / pod blight	Brown lesions on leaves, stems and pods; dark fruiting bodies; premature defoliation.	Representative images available in soybean disease references.
Soybean	Disease	Alternaria leaf spot	Brown spots, often with concentric rings; spots merge and leaves drop early.	Representative images available in soybean disease references.
Soybean	Disease	Bacterial blight	Water-soaked lesions and angular leaf spots; yellowing and wilting of infected leaves.	Image source: SoyNet soybean disease dataset/reference.
Jowar (Sorghum)	Pest	Shoot fly	Central shoot dries to form a dead heart; growing point is damaged.	Representative images available from ICAR sorghum pest references.
Jowar (Sorghum)	Pest	Stem borer	Shot holes and stem tunnelling; dead hearts; weakened stems and possible lodging.	Representative images available from ICAR sorghum pest references.
Jowar (Sorghum)	Pest	Shoot bug	Sap sucking causes yellowing/drying of leaves; plants become weak and stunted.	Representative images available from ICAR sorghum pest references.
Jowar (Sorghum)	Disease	Anthracnose	Reddish-brown leaf lesions enlarge; dark fruiting bodies; severe leaf drying.	Image source: Plantix sorghum anthracnose field image.
Jowar (Sorghum)	Disease	Grain mold	Discolored or moldy grains; fungal growth and poor grain quality.	Representative images available from sorghum disease references.
Jowar (Sorghum)	Disease	Smut	Black powdery spore masses replace grains or parts of the panicle.	Representative images available from sorghum disease references.
Jowar (Sorghum)	Disease	Downy mildew	Chlorotic leaf streaks with white/gray downy growth; malformed panicles and stunting.	Representative images available from sorghum disease references.

Primary reference examples checked: ICAR-CICR cotton field-guide material; ICAR-Indian Institute of Soybean Research; TNAU Crop Protection soybean pages; ICAR sorghum pest literature; Plantix sorghum anthracnose reference; SoyNet soybean disease image dataset. Images are representative symptom references and should not be treated as definitive diagnosis.
